

Lab ONE:

For the NBAfile.py program, for each line, create a string using string formatting that puts the team, attendance, and ticket prices into a formatted string. Each line should look something like:

‘The attendance at Atlanta was 13993 and the ticket price was \$20.06’

Your program should then print these strings instead of the lines. Submit your code and the output of your program.

DUE 24 hours before the live session in Week 3.
